A comprehensive and engaging mathematics program

Your differentiation solution for teaching mathematics

Oxford Maths for Australian Schools is a comprehensive and engaging mathematics program for F–6 that ensures every student can access the curriculum at their own point of need. It offers multiple pathways for students of varying ability, and supports the 'gradual release of responsibility' approach, where initial scaffolding is gradually reduced to allow students to become confident and independent mathematicians.

Designed by experienced classroom teachers, *Oxford Maths* supports sequential acquisition of mathematical skills and knowledge, and is fully aligned with the Australian and Victorian Curricula and the NSW Syllabus.

A balanced approach

Oxford Maths includes a wealth of hands-on activities, small-group and whole-class tasks, practice exercises and open-ended, problem-solving opportunities. It helps students make connections with mathematics in the real world and encourages higher-order thinking and reasoning. The program comprises:

- Student Books
- Assessment Books with pre- and post-tests for every topic
- Teacher Dashboards with learning support and resources, and Markbook for online assessment, tracking and reporting
- Practice and Mastery Books
- Student Dashboards with online pre- and post-tests, plus practice quizzes and learning resources for every topic.

“ The approach used in Oxford Maths is designed to ensure that every student can experience success at their level. ”

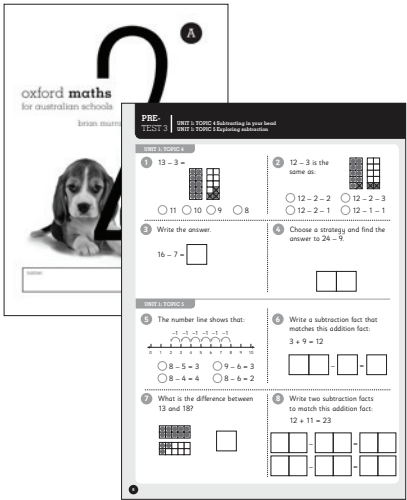

– Annie Facchinetti

Student Books

The *Oxford Maths* Student Books are an integral part of the *Oxford Maths* series and consist of:

- a clear and simple layout to support a developmental approach that incorporates initial scaffolding, which is gradually reduced to allow students to become confident and independent mathematicians
- student activity pages that cover the Mathematics content strands of Number and Algebra, Measurement and Geometry, and Statistics and Probability
- topics that follow a scope and sequence, which supports the sequential acquisition of mathematical skills, concepts and knowledge.

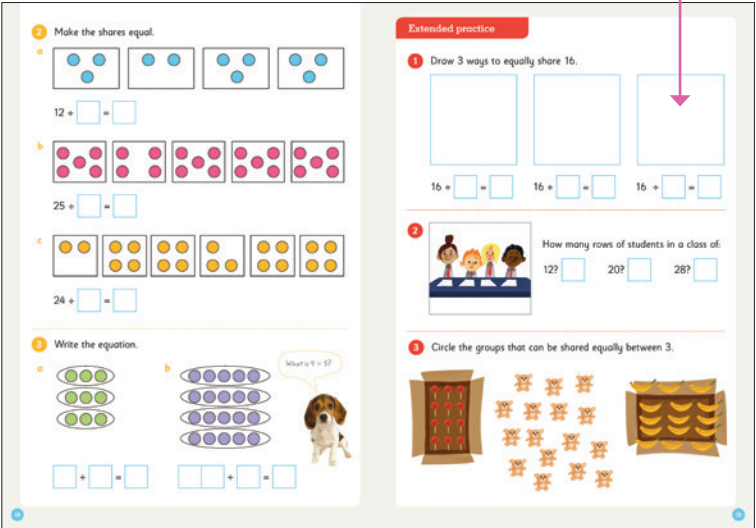

A worked example of the concept is provided.

The guided practice section provides an opportunity to practise skills, supported by careful scaffolding.

The independent practice section allows students to consolidate their understanding of the concept in different ways, with less scaffolding.

The extended practice section offers students opportunities to apply their learning and extend their understanding in new contexts.

Australian Curriculum Proficiency Strands

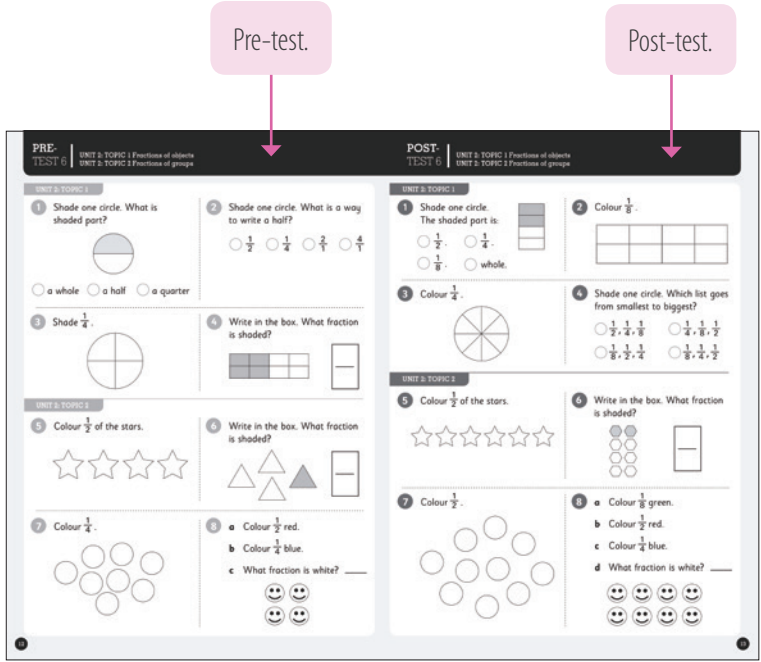

The *Oxford Maths* Student Books have an emphasis on the proficiencies of Understanding and Fluency in the guided and independent practice sections. The extended practice section incorporates more Reasoning and Problem-solving as students apply their knowledge in new contexts.

Assessment Books

The *Oxford Maths* Assessment Books provide teachers with an easily administered, yet comprehensive, assessment tool. They:

- include short pre- and post-tests for each topic
- are supported by a suggested teaching and testing schedule
- provide a simple grading system for measuring and reporting student progress.

Pre-tests:

- allow educators to identify students' point of need and choose teaching activities that will support their level of learning
- cover foundational content from the previous year, as well as the subject matter for each topic at the target year level, allowing teachers to identify the learning pathway for each student.

Post-tests:

- provide the opportunity for educators to measure student progress and confirm the effectiveness of the teaching sequence
- comprehensively cover the target year level as well as some content from the next year level, allowing teachers to measure learning growth and identify students performing above the expected standard.

The *Oxford Maths* Assessment Book allows teachers to quickly understand the current levels of student understanding of the topic or concept. Teachers can then choose an appropriate pathway to give struggling students extra support, extend competent students and consolidate the knowledge of all students with the resources available on the *Oxford Maths* Teacher and Student Dashboard.

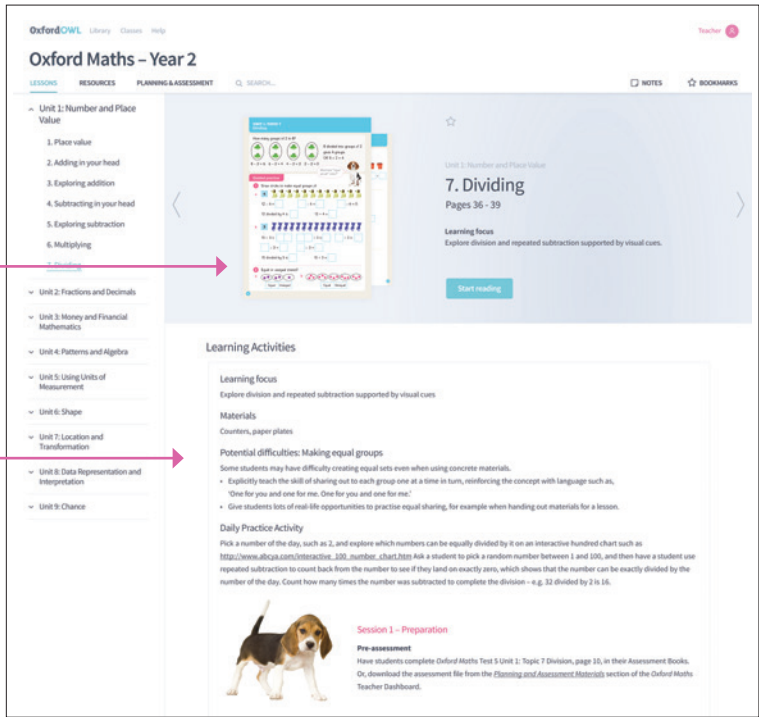

Teacher Dashboard

The *Oxford Maths* Teacher Dashboard provides online access to a wealth of resources and support material for Foundation to Year 6, including planners, curriculum links and answers. Used in conjunction with the *Oxford Maths* Student Books and Assessment Books, the dashboard offers teachers access to clear teaching and learning pathways that will meet the diverse needs of students in a single class and across the whole school. Used in conjunction with the Student Dashboard, the Markbook includes online assessment, tracking and reporting – topic by topic – for every student in the class.

Projectable Student Book pages for whole-class and small-group teaching.

Learning activities, including hands-on activities and small-group and whole-class tasks.

UNIT 1: TOPIC 1

Place value

Practice

1 Look at this number: 5 267 818

Show the value of each digit on the place-value grid.

Millions	Hundred thousands	Ten thousands	Thousands	Hundreds	Tens	Ones	Write the number using words if necessary
5	2	6	7	8	1	8	5 267 818

2 If we write nine hundred and five thousand, four hundred and seventy-six in digits, we use a zero to show there are no tens of thousands.

905 476

Write as digits:

• fifty-one thousand, six hundred and four

• two hundred thousand and twenty-six

• twelve thousand and ten

3 What is the value of the red digit?

• 403 290

• 2 406 219

• 80 487 003

• 6 329 477

• \$1 385 067

• 351 000 819

Challenge

Numbers can be arranged in patterns.

1 is a square number.

1 is a triangular number.

These are the first six square numbers. Fill in the gaps.

1 4 9

1 x 1 = 1² 2 x 2 = 2² 3 x 3 = 3² 4 x 4 =

These are the first four triangular numbers. Fill in the gaps.

1 3 6 10

1 x 2 ÷ 2 = 1 1 x 2 + 1 = 3 1 x 2 + 2 = 6 1 x 2 + 3 =

'Mastery' activities allow students to transfer their skills and understanding to real-world situations.

Expand these numbers. The first one has been done for you.

• 374 596: 300 000 + 70 000 + 4 000 + 900 + 90 + 6

• 214 087: 200 000 +

• 2 567 321:

• 5 673 207:

• 57 319 340:

Look at these digit cards.

What is the **largest** number that can be made using all the cards?

What is the **smallest** number that can be made if the digit "5" is in the millions place?

What is the **largest** number that can be made if the "7" is seven ones?

What is the **smallest** number that can be made if the "1" is in the tens of thousands place?

Write the number shown on each spike abacus as digits and in words.

Mastery

1 To change the calculator screen to show the second number, I would press:

• 24 550 = 24 650

• 37 154 = 77 154

• 139 255 = 719 255

• 999 999 = 1 000 000

2 Sometimes large numbers are abbreviated. \$1K means \$1000. \$1.3M can be used for \$1 300 000. Write the new price of these houses using digits in full.

• \$345K reduced by \$5000

• \$725K reduced by \$20 000

• \$875K reduced by \$50K

• \$1.5M reduced by \$250K

3 Imagine you have to choose just **one** digit in each of these numbers. Write:

- the digit you would choose
- the value of the digit
- the reason for your choice.

a A share of \$574 612.

b Writing out your times tables 574 612 times.

c Eating 574 612 of your favourite snack food in 10 minutes.

Building student confidence and bridging the gaps to success

Oxford Maths Ready is a series of teacher handbooks that supports mainstream classroom mathematics by offering learning opportunities for students who are substantially behind their peers. It gives teachers insights into the potential difficulties faced by these students and ideas to engage them in successful mathematics learning. This series can be used in conjunction with *Oxford Maths for Australian Schools*, or as a support to any other whole-school or classroom maths program.

Overcoming maths anxiety

Many adults readily acknowledge that they do not like maths, suffer from ‘maths anxiety’ or do not see themselves as competent mathematicians. This lack of confidence very often starts in primary school. *Oxford Maths Ready* is designed to support and engage primary students who have fallen behind in maths, and to help bridge the gap between where they are currently at and the relevant year level curriculum expectations. The Teacher Handbooks:

- use a developmental approach to build on students’ existing knowledge
- support students to activate their prior knowledge before extending to new concepts and skills
- draw on the sequences of skills identified in the Australian Curriculum: Mathematics and the National Numeracy Learning Progression
- give explicit guidance to help teachers and students focus on key ideas and strategies to enhance mathematical learning
- follow a ‘gradual release of responsibility’ model that encourages students to observe, discuss and engage in hands-on experiences, helping them work towards becoming independent mathematicians.

Advanced primary maths

Challenge and extend

Advanced mathematics program in line with Australian curricula

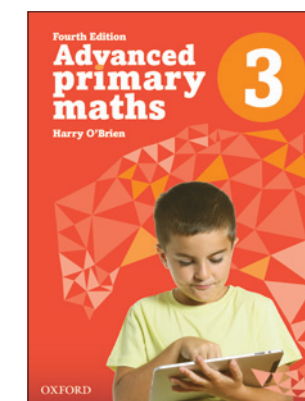

Advanced Primary Maths is the only advanced mathematics program written specifically for Australian students. It challenges and extends students in Years 3 to 6 in line with the Australian and Victorian Curricula and the NSW Syllabus.

Following a spiralled approach, *Advanced Primary Maths* can be used in conjunction with the whole-school *Maths Plus* program to give every student the opportunity to achieve success.

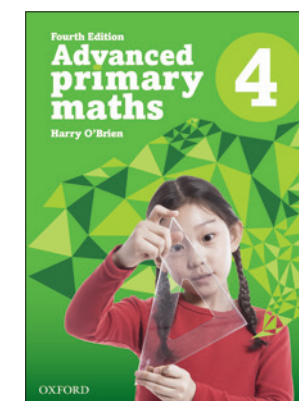

Focus on STEM

Advanced Primary Maths supports the effective teaching of mathematics through problem-solving and open-ended learning in real-world contexts. The program follows a spiral approach and includes:

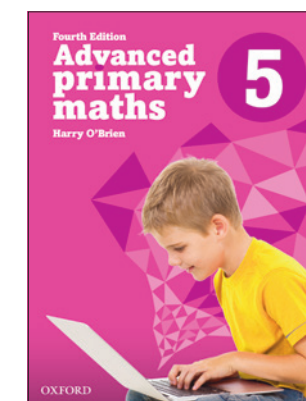

- Term planners, Find a Topic pages and curriculum cross-reference charts
- Open-ended Challenges, Super Problem-solving pages and Weekly Testers
- Diagnostic Reviews and Answers.

- a challenging mathematics program that supports extension and achievement
- an engaging mathematics program for the upper primary years
- problem-solving and open-ended learning opportunities.

Teacher Resources

Plan and implement teaching

Use the curriculum cross-reference charts, Term Planners and Find a Topic pages to prepare your lessons.

Review and assess

Use the Diagnostic Reviews and Answers section to assess students' work.

Australian Curriculum, Victorian Curriculum and NSW Syllabus cross-reference charts.

The chart is a grid with mathematical topics on the left and curriculum levels (Year 1 to Year 10) on the top. Topics include: Number and Algebra, Measurement and Geometry, Statistics and Probability, and others. Blue dots indicate which curriculum levels cover each topic.

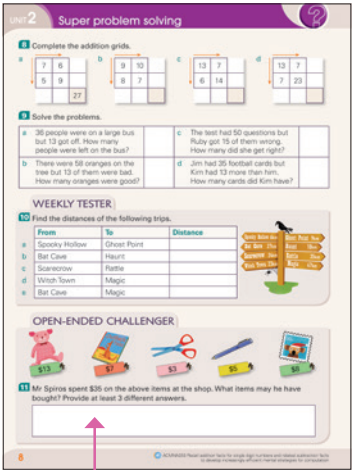

Student Resources

Practise and assess

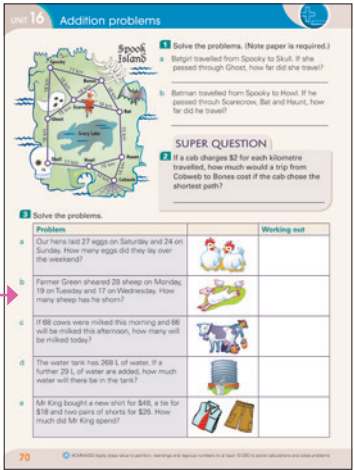

Advanced Primary Maths follows a spiral approach, allowing students to build on and revisit content over time. The Diagnostic Reviews can be used to assess the students' understandings of concepts covered.

Challenge and extend

Students can use the Super Problem Solving pages, with Open-ended Challenges and Weekly Testers, to consolidate and extend their learning.

Open-ended Challenger questions with multiple solutions.

Super Questions for exploring concepts at a higher level.

CHALLENGING MATHEMATICAL TASKS

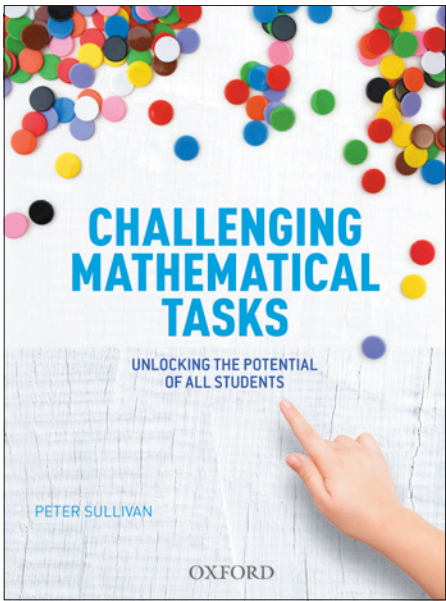

Encouraging students to persist and succeed in their learning

Using challenging mathematical tasks to unlock student potential

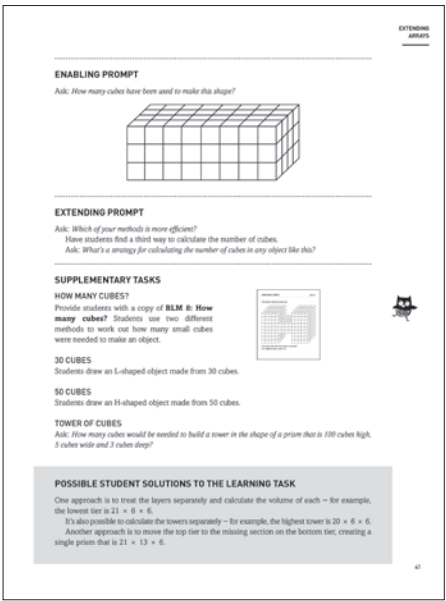

Challenging Mathematical Tasks supports the idea that students learn best when they work on problems that they do not yet know how to solve. Peter Sullivan's research shows that many students do not fear challenges in mathematics, but welcome them. And rather than having teachers instruct them, these students prefer to work out solutions for themselves.

Challenging Mathematical Tasks:

- includes activities that allow for sustained thinking, decision-making and risk-taking by the students
- features a 'Learning Focus', 'Key Mathematical Language', 'Pedagogical Considerations', 'Enabling and Extending Prompts' for each task, plus 'Supplementary Tasks' and 'Possible Solutions'
- is written by a well-established expert in the field of teaching and learning mathematics
- follows a set structure to help students approach and work through the tasks.
