Depth study 2: Investigating one ancient society

Chapter 8
Ancient Egypt

8A How did physical features influence development in ancient Egypt? 214
8.1 Ancient Egypt: a timeline 216
8.2 The Nile 218
8.3 The climate of ancient Egypt 222
8A Rich task: Irrigation in ancient Egypt 224

8B What shaped the roles of key groups in ancient Egypt? 226
8.4 Key groups in Egyptian society 226
8.5 Pharaohs 228
8.6 Significant individual: Tutankhamun 230
8.7 Other key groups in ancient Egyptian society 232
8B Rich task: Farming in ancient Egypt 234

8C How did beliefs, values and practices influence ancient Egyptian lifestyles? 236
8.8 Religious beliefs and practices 236
8.9 Everyday life 238
8.10 Warfare 240
8.11 Death and funeral customs 242
8.12 How Egyptian mummies were made 244
8C Rich task: The Great Pyramid at Giza 246

Chapter 9
Ancient Greece

9A How did physical features influence development in ancient Greece? 248
9.1 Ancient Greece: a timeline 250
9.2 The impact of geography on ancient Greece 252
9.3 A typical Greek city-state 254
9.4 The beginnings of ancient Greece 256
9A Rich task: A closer look at the Minoans 258

9B What shaped the roles of key groups in ancient Greece? 260
9.5 The political systems of ancient Greece 260
9.6 Key groups in ancient Greek society 262
9B Rich task: Sappho 264

9C How did beliefs, values and practices influence ancient Greek society? 266
9.7 Religious beliefs and practices 266
9.8 The birth of the Olympic games 268
9.9 Everyday life 270
9.10 Warfare 274
9.11 Significant individual: Leonidas 276
9.12 Death and funeral customs 278
9C Rich task: Ancient Greek pottery 280

Chapter 10
Ancient Rome

10A How did physical features influence development in ancient Rome? 282
10.1 Ancient Rome: a timeline 284
10.2 The Mediterranean Sea and the Tiber River 286
10.3 Earthquakes and volcanoes 288
10A Rich task: The legend of Romulus and Remus 290

10B What shaped the roles of key groups in ancient Rome? 292
10.4 Key groups in ancient Roman society 292
10.5 Significant individual: Julius Caesar 294
10.6 Other key groups in Roman society 296
10B Rich task: Four Roman emperors 298

10C How did beliefs, values and practices influence ancient Roman society? 300
10.7 Religious beliefs and practices 300
10.8 Everyday life 302
10.9 Roman baths 304
10.10 Public entertainment 306
10.11 The Colosseum 308
10.12 Warfare 310
10.13 Death and funeral customs 312
10C Rich task: Gladiators 314

Chapter 11
Ancient India (ebook only chapter)

11A How did physical features influence development in ancient India? 316
11.1 Ancient India: a timeline 318
11.2 Landscape and climate 320
11.3 Ancient India’s early civilisation 322
11A Rich task: Understanding daily life in the Indus Valley 324

11B What shaped the roles of key groups in ancient India? 326
11.4 The social structure of ancient India 326
11.5 Other key groups in Indian society 328
11B Rich task: The status of Untouchables 330

11C How did beliefs, values and practices influence ancient Indian society? 332
11.6 Religious beliefs and practices 332
11.7 Everyday life 334
11.8 Warfare 336
11.9 Death and funeral customs 338
11C Rich task: The legacy of ancient India 340
Chapter 12
Ancient China

12A How did physical features influence development in ancient China?
12.1 Ancient China: a timeline .............................................. 320
12.2 Landscape and climate ................................................. 322
12A Rich task: China's geographical features ......................... 324

12B What shaped the roles of key groups in ancient China?
12.3 Chinese dynasties ....................................................... 326
12.4 Significant individual: Qin Shi Huang ............................. 330
12.5 Key groups in Chinese society ........................................ 332
12.6 Women in ancient China ............................................... 334
12B Rich task: Qin Shi Huang .............................................. 336

12C How did beliefs, values and practices influence ancient Chinese society?
12.7 Religious beliefs and practices ....................................... 338
12.8 Everyday life .................................................................. 340
12.9 Warfare ......................................................................... 342
12.10 The Great Wall of China ............................................... 344
12.11 Death and funeral customs .......................................... 346
12C Rich task: The legend of Mulan ................................... 348

PART 3
Economics and business

Concepts and skills

Chapter 13
The economics and business toolkit ........................................ 352

13A What are the economics and business concepts?
13.1 Economics and business concepts ................................ 354

13B What are the economics and business skills?
13.2 Economics and business skills .................................... 358
13.3 Questioning and researching ......................................... 359
13.4 Analysing .................................................................... 360
13.5 Evaluating .................................................................... 361
13.6 Communicating and reflecting ...................................... 363

Producing and consuming

Chapter 14
Economic choices ................................................................. 364

14A How do individuals and businesses make economic choices?
14.1 Making rational decisions ............................................. 366
14.2 Producers and consumers ............................................. 368
14A Rich task: An everyday dilemma ................................. 370

14B How do businesses respond to consumer demand?
14.3 Influencing prices ......................................................... 372
14.4 How businesses respond to consumer demand .............. 376
14B Rich task: Market research ........................................... 378

14C Why do we work?
14.5 Why we work .............................................................. 380
14.6 Types of work .............................................................. 384
14.7 Earning an income ....................................................... 388
14.8 Retirement ................................................................. 390
14C Rich task: Career change ............................................. 394

Chapter 15
Innovation and entrepreneurship ........................................... 396

15A What are the characteristics of an entrepreneur?
15.1 Innovation and entrepreneurship ................................ 398
15.2 Skills of entrepreneurs ................................................. 400
15.3 Establishing a shared vision .......................................... 402
15.4 Innovation in Western Australia ................................. 404
15A Rich task: Social entrepreneurs: Thankyou ................. 406
PART 4
Civics and citizenship

Concepts and skills

Chapter 16
The civics and citizenship toolkit .................................................. 410

16A What are the civics and citizenship concepts?
16.1 Civics and citizenship concepts ................................................. 412

16B What are the civics and citizenship skills?
16.2 Civics and citizenship skills ...................................................... 416
16.3 Questioning and researching ...................................................... 417
16.4 Analysing ................................................................................. 419
16.5 Evaluating ................................................................................. 420
16.6 Communicating and reflecting .................................................. 421

Designing our political and legal system

Chapter 17
Designing our political and legal system ............................................ 422

17A How is Australia's political system shaped by the constitution?
17.1 The purpose and value of the Australian constitution ................ 424
17.2 Three levels of government ........................................................ 426
17.3 The separation of powers .......................................................... 428
17.4 Australia's bicameral parliament ................................................. 430
17.5 Changing the constitution .......................................................... 433
17A Rich task: A classroom constitution .......................................... 436

17B What are the key principles of Australia's legal system?
17.6 Australia's legal system .............................................................. 438
17.7 Principles of Australia's legal system ......................................... 440
17.8 Participants in the legal system ................................................... 444
17.9 Accessing legal representation ................................................... 448
17B Rich task: The code of Hammurabi ............................................. 450

Focus on inquiry

Each chapter of Oxford Big Ideas Humanities and Social Sciences is structured around key inquiry questions from the Western Australian Curriculum. Each unit of the text supports teachers and students as they adopt an inquiry-based approach to the key learning areas in the Humanities and Social Sciences.

Focus on engagement

Each unit of the Student book combines a range of engaging source materials – such as photographs, videos, data tables, graphs and illustrations – with supporting questions and activities.

Source materials – such as photographs, infographics, political cartoons, graphs – simplify difficult concepts and engage reluctant learners.

Check your learning activities accompany every unit, allowing students to consolidate and extend their understanding. These are graded according to Bloom's Taxonomy – catering for a range of abilities and learning styles.
Focus on concepts and skills

Complete coverage of all concepts and skills provided in stand-alone reference ‘toolkits’. All of these concepts and skills are also integrated throughout the text so students can see them at work in context.

Rich task activities encourage students to apply the knowledge and skills they have learned in each chapter to a new and interesting case study, event or issue.

Skill drill activities guide and support students step by step as they learn and apply key skills.

Extend your understanding activities challenge students to conduct further research, or complete group work, to deepen their understanding of an issue or skill being investigated.

Digital support

Student obook assess provides a fully interactive electronic version of the print Student book in an easy-to-read format. A host of additional resources for students – such as videos, worksheets, interactives objects, online quizzes and multimedia links – are linked to each unit in the book making them easier to access than ever before.

obook assess is compatible with laptops, iPads, tablets and IWBs, and access to content is provided online and offline.

TEACHER obook assess

Teacher support is offered in digital format via Teacher obook assess. Teacher notes, answers, tests, additional worksheets, lesson ideas, planning tips and assessment advice are provided for every unit. Teacher obook assess allows teachers to manage their classes by assigning work, tracking progress and planning assessment.
Depth study 1: Investigating the ancient past

Investigating the ancient past

Finding out about the past is not easy. Some ancient peoples and civilisations have left behind evidence of their existence, while many others have not. This means our knowledge and understanding is often incomplete. We can look at evidence such as these ruins at Göbekli Tepe in Turkey to find clues about the past, but they do not always give us the full story. Historians use a range of sources in order to piece together stories and events that took place in ancient times. They also consider a range of different opinions and perspectives about what happened in order to reach the most likely conclusions.

7A

How is history investigated?

1 How do you think historians could use the ruins at Göbekli Tepe to piece together an understanding of the past?

7B

What sources can be used in a historical investigation?

1 These ruins are a primary source for the study of ancient history, because they were made during the period being studied. What can primary sources tell us about history that sources made afterwards cannot?
Source 1 Göbekli Tepe, located in south-eastern Turkey, is the world’s oldest human-made religious building. Historians believe it was most likely built by hunter-gatherers around 12,000 years ago.

7C What methods are used to investigate the past?
1. How could scientists and historians work together in order to better understand these ruins?
2. What types of things could they tell us about this ancient society?

7D Why is conservation important?
1. What types of things might damage these ruins?
2. Why do you think historians would want to conserve them?
7.1 How historians investigate history

History is the study of the past. Historians try to understand and explain the past by examining its remains – fossils, bones, books, ruins – known as sources. Historians use sources to generate theories (known as hypotheses) about people and events from the past. The process of investigating history therefore involves finding sources, asking questions about these sources, and then creating hypotheses. In order to prove these hypotheses, historians continue looking for more sources and gathering more evidence.

Some historical sources are easier to find than others. Some groups of people from the past have left behind more primary sources than others. No matter how many sources a historian finds, each piece can only tell part of the story. And regardless of whether the source is a small fragment of ancient pottery or a detailed book, it will only represent a small piece of the puzzle or one person’s perspective. To combat this problem, historians need to research widely, recognise bias and accept that there are periods in history for which we cannot gather evidence. Increasingly, historians work with experts in other fields – such as scientists, biologists, translators, palaeontologists, geologists and archaeologists – to construct a more accurate and complete picture of the past.
What sources can be used in a historical investigation?

Historians use a variety of sources in historical investigations. These are usually divided into primary sources and secondary sources.

Primary sources
Primary sources are things that existed or were written or made during the time being studied. They have a direct link to the event, period or person being studied.

Secondary sources
Secondary sources are things that have been created after the time being studied. A secondary source interprets and analyses primary sources. These sources are one or more steps removed from the event. A secondary source for one historical inquiry may be a primary source for another. For example, a painting of a 10th-century battle by a 17th-century artist is a primary source for that artist’s life but a secondary source for the battle.

Source 2  This spearhead is a primary source that provides evidence about our Indigenous Australian past.

Source 3  Archaeologists excavate ancient sites in order to find artefacts, buildings or even human remains that will help them understand the past.

Check your learning 7.1

Remember and understand
1. Describe some of the sources historians use to investigate the past. What they can tell us?
2. What is a hypothesis? Why is it important for a historian to have a hypothesis at the start of a historical investigation?
3. Historians today work with a range of different experts to analyse the past. List three such experts.

Apply and analyse
4. In your own words, explain the difference between primary sources and secondary sources.
7.2 Archaeological digs

If you missed the grand final of your favourite sport and wanted to know what happened, you probably wouldn’t get reliable information if you spoke to just one person. You would need to check many sources of information – newspapers, television reports, game replays, fan blogs and so on. Likewise, historians cannot just rely on one source of evidence for an investigation. Historians need to act like detectives, constantly searching for clues about the past to gather as much evidence as possible.

When conducting investigations into the ancient past, historians rely on the work of many other experts, including biologists, geneticists, palaeontologists and archaeologists. Many of these experts work together at archaeological digs, which are an important source of evidence of the ancient past.

Archaeologists uncover sources of evidence of past peoples. This includes not only skeletons but also the places where they lived and travelled, such as the ruins of towns, temples and tombs; artefacts they made, such as pottery, weapons, tools and coins; inscriptions and stone reliefs they carved; even rubbish dumps (middens) and fire sites. Some sources are so old that they have turned into fossils or remain only as a ‘shadow’ or crust in the soil. Some archaeologists work underwater, looking for sources on or beneath the sea bed, such as old shipwrecks.

Most sources found on land are buried. They might be covered by the silt of past floods, sand blown by the wind, or forests that have grown over them. Some, like the ancient Aztec capital of Tenochtitlan, lie beneath more recent cities or settlements that have been built over the top of them.

Once a site is discovered, archaeologists rope off or otherwise protect the site, called the ‘dig’. It is then marked off into segments, in a grid. This allows the precise location of any items that are found to be specified. After surveying the site, archaeologists remove overlying rocks and dirt. Ancient objects can be extremely delicate, so archaeologists need to take great care uncovering them.

Once a source has been fully exposed or excavated, the archaeologist photographs and numbers it, and records details of its size, appearance and exact location.
key concept: Significance

Ötzi the Iceman

In 1991, the preserved corpse of a man who had lived 5300 years ago was found accidentally by tourists in the Ötzal Alps, in northern Italy. Ötzi the Iceman is the oldest natural mummy in Europe. At first, the people who found him did not realise the significance of their find. A jackhammer was used to chisel the corpse out, damaging part of the body. Later, the body was treated with much more care. The mummy provided many different types of evidence that showed what life was like when Ötzi was alive. For example, his lungs were blackened, probably from breathing in campfire smoke, and his stomach contained remnants of what he had been eating. Scientists could tell what kind of environment he had lived in from pollen found in his intestine, and they could see what sort of lifestyle he had led from his bones. He also had a tattoo. With the corpse were clothes, tools and equipment, which presented further clues to his life. Ötzi gave historians new insights into the lives of ancient Europeans. For more information on the key concept of significance, refer to page 169 of ‘The history toolkit’.

Check your learning 7.2

Remember and understand
1 Identify what kinds of sites archaeologists excavate.
2 Explain how archaeologists investigate a dig.

Apply and analyse
3 Analyse how Ötzi the Iceman’s body could be used to provide information about life in the Ötzal Alps more than 5000 years ago.
4 Sketch an archaeological dig and label the different types of evidence that could be found there.

Evaluate and create
5 Imagine you are an archaeologist. Briefly explain why your job is important to the study of history.
Historical timelines

Timelines are a critical part of the study of history because they allow us to place events in **chronological order** (that is, the order in which they took place). It is important when studying history to know when particular events happened so that we can draw conclusions about cause and effect, and so we can understand the context of particular historical events.

### Skilldrill

**Creating a timeline**

A timeline is a diagram showing a range of events over time. The events are arranged in the order in which they occurred. Usually a timeline is shown as a horizontal or vertical bar or a single line. This allows it to be drawn precisely.

Usually BCE (or BC) and CE (or AD) are shown with directional arrows at one or both ends of a timeline. This indicates that time did not start or stop when the timeline starts or stops.

Source 1 shows how to construct a timeline step by step.

**Apply the skill**

1. Draw a timeline to show these important discoveries and inventions.
   - Wheel – 3500 BCE
   - Silk – 2700 BCE
   - Alphabet – 1100 BCE
   - Paper – 105 BCE
   - Gunpowder – 900 CE
   - Car – 1885 CE
   - Personal computer – 1964 CE
   - DVD player – 1998 CE
   - iPod – 2001 CE

2. What sort of events do you think historians plot on timelines?

3. Why can a timeline be more useful than a list of dates?

Source 1  Steps in drawing a timeline
Extend your understanding

Timelines can help us to understand how different historical events might have influenced each other. Construct a personal timeline for somebody in order to understand how history has affected that individual.

**Step 1** Find a person significantly older than you to interview. This could be a grandparent or an older family friend. Ask them to tell you the most important things that have happened to them in their life, and when they happened. Construct a timeline of the important events in that person’s life.

**Step 2** Do some research to determine what events were happening in the world and in this person’s country during their life. Add those events on the timeline in a different colour so you can distinguish them from your subject’s personal story.

**Step 3** Study the timeline and answer the following questions:

1. Can you draw any links between personal events and the world events happening around your subject? For example, the person you interviewed may have fought in a war, or may have travelled overseas to see the Olympic Games.
2. Which events do you think were most influential in your subject’s life?
3. How do you think the historical events on the timeline would have affected you if you were born at the same time as your subject? Take into account how old you would have been when each event occurred.

Source 2 The personal timelines of older people can be a rich source of history.
7.3 Primary and secondary sources

Historical sources are items that a historian looks for and then studies to investigate the past. If the right questions are asked about sources, they can provide evidence for an argument about history. Historians want to know who made a source, how old it is, where it came from, whether it is reliable, and what motivated the person who created it. Historians also look for any gaps or silences in the evidence. Sometimes what is not said can be as important as what is.

The past is represented in many different forms and from a range of different perspectives. They include people’s remains, what is left of what they built, wrote, crafted or painted, and what they have passed down by way of stories, rituals and ceremonies. The past is also represented by historians and others who write about events or historical periods after they happened. Sources can be divided into two categories: primary and secondary sources.

Primary sources

Primary sources are those that were created during the time being studied. They have a direct link to the event, period or person being studied. They may be:

- the skull of a person who lived during the period
- the remains of an ancient temple
- a document or inscription written during the period
- the oral testimony (first-person account) of someone who saw or experienced the time in question.

To find primary sources, historians can look in a number of places. These include excavating ancient sites and also looking in libraries and museums, which often have rich collections of primary sources.

Secondary sources

Secondary sources deal with a particular period, but they are made after that time. For example, this textbook is a secondary source. Some examples of secondary sources are listed in Source 2. A source may be both primary and secondary, depending on which historical period is being studied. Imagine you had a painting of a 10th-century battle by a 17th-century artist. The painting would be a secondary source about the battle, since it was created long after the battle. It would be a primary source about that artist’s life or about painting styles in the 17th century, since it was created during the period being studied.

Source 1  This Torres Strait Islander’s jewellery, clothing and paint are primary sources of evidence about the Indigenous culture of Saibai Island.

Examples of secondary sources used in historical inquiries

- Interpretations of past events by historians and other scholars
- Films and documentaries about past events
- Maps depicting past journeys and trends
- Graphical displays (e.g. timelines)
- Books, magazine articles and websites

Source 2  Some examples of secondary sources

<table>
<thead>
<tr>
<th>Type of source</th>
<th>Value or purpose</th>
<th>Limitation</th>
</tr>
</thead>
</table>
| Primary source | • Was created by somebody who actually experienced the event.  
• Gives direct insight into the past.  
• Is a surviving link to a particular time in history. | • May be inaccurate or distorted.  
• May be damaged or incomplete. |
| Secondary source | • Can fill in gaps about primary sources.  
• Is often prepared by experts in their field.  
• Can provide other valid perspectives.  
• Shows how evidence can be used to construct versions of the past (called representations). | • May be inaccurate or distorted.  
• Is not a direct link to the past.  
• Is prepared after the time being studied. |

key concept: Evidence

Oral history

The Indigenous societies of ancient Australia had an oral culture. With no form of writing, their records were preserved in a range of ways. These include the paintings they left, their ceremonies, and the stories, laws and traditions they passed on by word of mouth. Historians and anthropologists rely heavily on these primary sources in searching for evidence of Indigenous people’s history. Source 4 is one example of an oral account of the Japaljarri-Jungarrayi – a creation story.

Source 4

The story I am telling is about my fathers in the Dreamtime who made the stars travel across the sky ... They were not made randomly, but by the Japaljarri-Jungarrayi Dreaming who created the Milky Way and carried stars and witi poles [logs, set on fire at one end to provide light] as he travelled ... We were taught about these Dreamings by our grandfathers, fathers and elder brothers.

The [people to the north and west of Alice Springs] instructed us in the Warlpiri law and told us not to forget what we had been taught ... I am now telling the Dreaming of the Milky Way, all of those millions of stars up above us, as I was told it by our old men.

Paddy Japaljarri Sims,  
‘Yiwarrakurlu/Milky Way’ in Warlukurlangu Artists,  
Kuruwarri/Yuendumu Doors, Australian Institute of Aboriginal Studies, Canberra, 1987, Door 29, p. 127

For more information about the key concept of evidence, refer to page 167 of ‘The history toolkit’.

Check your learning 7.3

Remember and understand

1  In your own words, write a definition for primary and secondary sources.
2  Make a table that lists some examples of primary and secondary sources.

Apply and analyse

3  Explain what we can learn from oral history and identify some of the advantages and disadvantages of oral accounts.
4  Imagine you are a historian in the year 2100 who is studying the life of a person who died in 2013. What primary and secondary sources could you use to gather evidence about their life? List two of each.
5  Compare and contrast the usefulness of primary and secondary sources. List three advantages and three disadvantages of each.

Source 5  Aboriginal rock art is an example of a primary source.
Interpreting sources

Historians need to use a variety of sources to develop an understanding of a particular historical event or concept. Primary and secondary sources provide different types of information and different levels of accuracy. Both types of sources can be biased in particular ways, depending on who made or wrote them and why.

Comparing primary and secondary sources

In the study of history, it is important to distinguish between primary and secondary sources of evidence. It is also important to be able to determine how reliable these sources are.

When examining a source you must determine:

• who made it
• why it was made
• whether the creator may have wanted to influence people reading or viewing it
• what information the creator might have had access to when making it
• whether the creator could have had a bias or unfair prejudice towards the thing or event they describe in the source
• how reliable it is.

Source 1 A modern artist’s interpretation of how the Colossus of Rhodes may have been built

Source 2 A modern artist’s interpretation of how the Colossus of Rhodes may have looked
Now form small groups to answer the following questions based on the most reliable sources provided:

1. When was the statue built and why?
2. How tall was it?
3. When did it fall and why?
4. Which are the two primary sources? At which point in the history of the statue were they written?
5. How sure can we be of what the Colossus looked like?

Source 3
At Rhodes was set up a Colossus of seventy cubits high, representing the Sun ... the artist expended as much bronze on it as seemed likely to create a dearth [shortage] in the mines, for the casting of the statue was an operation in which the bronze industry of the whole world was concerned.

Philo of Byzantium, scientist and engineer, 1st century BCE

Source 4
Colossus, one of the seven wonders of the world, was built around 304 BCE by Chares the Lindos (from Lindos), in honour of Apollo the god of the sun (Helios in Greek) and patron god of Rhodes. It stood one hundred feet tall and it was located at the entrance of Mandraki harbour. Made entirely of bronze, it was then used as a lighthouse. It symbolised the strength and wealth of the Rhodian people.

It is believed to have been destroyed in 226 BCE by a powerful earthquake. Later the pieces, it is believed, were taken by the Egyptians.

Rhodes Travel, www.rhodestravel.co.uk/rhodes-tn/colossus-rh.htm

Source 5
Even as it lies it excites our wonder and admiration. Few men can clasp the thumb in their arms, and its fingers are larger than most statues. Where the limbs are broken asunder, vast caverns are seen yawning in the interior. Within it, too, are to be seen large masses of rock, by the weight of which the artist steadied it while erecting it.

Pliny the Elder, Roman author (23–79 CE)

Source 6
Colossus of Rhodes (Gk. kolossos, ‘a more than lifesize statue’), a bronze statue of the Greek sun-god Helios, one of the Seven Wonders of the ancient world. Erected to commemorate the successful defence of the city against a siege in 305–304 BCE, it stood at the entrance of the harbour (the tradition that it stood astride the entrance is discredited), and was 70 cubits high (30–35 m, 100–115 ft). It was completed c. 280 BCE and overthrown by an earthquake c. 224 BCE.

Oxford Companion to Classical Literature, Oxford University Press

Apply the skill
1. Look carefully at Sources 1–6 describing the Colossus of Rhodes and complete the table. Like all historians, you may need to conduct some research to help you, or even make an educated guess based on the evidence available to you. Use this evidence to make an assessment about whether the sources show any bias and decide how reliable each one is. Justify your responses for each source.

<table>

</thead>
</table>

Extend your understanding
Now form small groups to answer the following questions based on the most reliable sources provided:

1. When was the statue built and why?
2. How tall was it?
3. When did it fall and why?
4. Which are the two primary sources? At which point in the history of the statue were they written?
5. How sure can we be of what the Colossus looked like?
7.4 Scientific techniques

When archaeologists and historians find objects from the past, they often need help from scientists who use the latest techniques and machinery to gather more information. Many of these techniques – known as scientific techniques – are used to assess the likely age of sources. They can tell us, for example, the ages of the skulls in Source 2. Scientific techniques like the ones described below need to be used in combination with other historical techniques and evidence to provide a complete explanation of the past.

Scientific dating techniques

Many scientific dating techniques are used to investigate the past. Some are absolute dating techniques, which allow the age of an object to be stated as precisely as possible (in years). Others are relative dating techniques, which can only determine whether an object is of an earlier or more recent date relative to (compared with) another object.

| Source 2 | Three skulls – front: Homo habilis (Kenya, 1.88 million years old); centre: Homo erectus (Kow Swamp, Victoria, 13000 years old); back: Homo sapiens (Keilor, Victoria, 13000 years old) |
| Stratigraphy (analysis of soil or rock layers) | Fluorine dating (analysis of the age of bones) |
| Radiocarbon dating | Dendrochronology (analysis of tree rings) |
| DNA analysis | Ice-core sampling |
| Palynology (analysis of microscopic organic compounds) |

Some scientific techniques used to analyse historical sources

Some scientific techniques used to investigate the past

Stratigraphy

Stratigraphy involves analysing sources found in the different strata of earth. Strata are layers marking different geological time periods. Since the layers of rocks are generally youngest on top and oldest on the bottom, items found in the lowest strata will usually be the oldest (see Source 3). In an archaeological dig, scientists may know that a particular stratum (the singular form of strata) is 1000 years old. This means that the items excavated from that stratum will probably be of a similar age.

Natural disasters and geological events can change the way strata are arranged, so it is not an exact science. Stratigraphy is a relative dating technique.

Fluorine dating

Bones can be dated using fluorine dating. Bones absorb the chemical element fluorine from the soil in which they are immersed. The longer they are there, the more fluorine they absorb. Like stratigraphy, this is a relative dating technique.
What methods are used to investigate the past?

Dendrochronology

Dendrochronology refers to tree-ring dating. Scientists can date a tree by studying the growth rings in a cross-section of its trunk (see Source 5). Each year in a tree’s life, a new ring forms. It varies in shape and width according to the conditions that year. It has two parts: a light part (spring growth) and a dark part (summer/autumn growth). Scientists can study these rings and can compare rings between trees to determine their age.

Sometimes experts can calculate the relative age of wooden artefacts, such as bowls or floorboards. This is possible if they can match the ring patterns in the wood with those of local trees of the same species.

Radiocarbon dating

Radiocarbon dating is a complex technology that is more accurate than stratigraphy and fluorine dating. It is an absolute dating technique. All living things contain a particular type of carbon called C14, which is why we are called carbon-based life forms. This carbon is continuously renewed while an organism is alive. Living things stop absorbing C14 when they die. C14 is radioactive, which means that, over time, it breaks down at a known rate into a different type of carbon. Scientists use special equipment to work out how much C14 is still present in once-living organisms. Using that information, they can work out how long ago the organism died, and therefore how old it is.

Source 3 Different artefacts are found in different strata (or layers). These are generally positioned according to their age. Artefacts found in stratum A will be more recent than those found in stratum E.

Source 4 Radiocarbon dating would determine the likely age of mummified human remains such as these. This corpse was found in central Asia.

Source 5 Trees grow a new ring every year.
Other scientific techniques

DNA analysis

All living organisms (except some viruses) contain deoxyribonucleic acid, or DNA. DNA holds the genetic code that determines how a living thing develops and operates. It is comparable to the ones and zeros that make up computer code and tell your software what to do. DNA is sometimes preserved in the remains of once-living organisms. Scientists can learn a lot from studying DNA. They can tell what type of organism it is. They can also tell how closely related it is to other species and to other individuals of the same species. For example, they can study the DNA of ancient remains and determine how closely related they are to modern humans.

Ice-core sampling

This technique works in a similar way to stratigraphy. Ice-core samples are long cylinders of ice that have been drilled from thick ice sheets. These samples are most commonly taken in the polar ice caps of Antarctica and Greenland, or from high mountain glaciers all over the world. As ice forms in the gradually increasing build-up of annual layers of snow, lower layers are older than upper layers. This means that an ice core contains ice formed over many years. Air trapped at various sections along an ice core, such as the one shown in Source 6, provides evidence of what the atmosphere was like at different periods in the past. Scientists can then form conclusions about the climate at a particular time.

Palynology

Palynology is the study of microscopic organic compounds (such as pollen) that are found in soil. Taking soil cores enables scientists to analyse fossilised pollen and find out how plant life in a particular area has changed over thousands of years (see Source 7).

Check your learning 7.4

Remember and understand

1. In your own words, describe each of the scientific techniques covered in this section.
2. Describe how DNA analysis can help historians to better understand a source.

Apply and analyse

3. Explain why it is important to be able to date sources.
4. Imagine you found human remains at an archaeological dig. Which methods would be best suited to dating these remains and why?

Evaluate and create

5. Explain which dating technique you think is the most accurate or the most reliable. Justify your answer.
6. Study the evidence about the age of the Sphinx in the following Key concept section. Determine how old you think the Sphinx is. Make sure you support your decision with evidence.
The mystery of the Sphinx

Historians and archaeologists disagree about how old the Sphinx is. Different forms of evidence point to different answers, and historians look at various forms of evidence in combination to form an opinion about the Sphinx’s age.

Most archaeologists believe that the Sphinx is about 4500 years old, having been built around 2500 BCE, but there are some who believe it is much older.

The Sphinx lies among Egypt’s pyramids at Giza. It was carved from an outcrop of limestone rock and was probably once painted. The Sphinx has been studied by many scholars and scientists. There is much we know but also a great deal we do not. For example, whose face is represented on this monument? How and why was the face and nose of the Sphinx damaged? Are there tunnels beneath it? How old is it?

HISTORICAL EVIDENCE

Between the front paws of the structure there is a tablet inscribed with hieroglyphs (similar to those in Source 9). The hieroglyphs describe a dream of the Egyptian king Thutmosis IV, who ruled Egypt between 1424 and 1417 BCE. He ordered that this inscription be made. It includes the statement that the Sphinx was made ‘in the days of Khafre, when the world was young’.

The Sphinx lies close to the tomb of the Egyptian pharaoh Khafre, who lived c. 2603–2578 BCE. It is also believed to resemble Khafre.

EVIDENCE FROM EROSION

Some archaeologists and scientists believe the Sphinx was built about 9000 years ago. They argue that the erosion on the Sphinx could only have been caused by steady rainfall. The last time it rained steadily in the Sahara was about 8000 years ago.

Other scientists contest this evidence. They argue that the erosion could have other causes. The erosion could also have been caused by water rising in the ground under the Sphinx. It moves up into the limestone, and when it evaporates it leaves behind salt, which can cause the limestone to break down.

Finally, there is no evidence of an Egyptian civilisation that existed in 7000 BCE. For the Sphinx to be 9000 years old, there would have to have been an ancient civilisation that pre-dated the Egyptians. This is a tantalising idea, but is it true?

For more information on the key concept of contestability, refer to page 170 of ‘The history toolkit’.

Source 8 The Sphinx, with the body of a lion and the head of a man

Source 9 Stone relief of Egyptian hieroglyphs found at the entrance to a tomb
7C rich task

Studying Aboriginal Australia

In addition to using scientific techniques, historians use a range of other methods to investigate the past. This always involves using a wide variety of sources. To understand the ancient past of Australia, historians use artefacts, photographs, oral accounts and other sources. A combination of sources must be used if a historian is to create a complete picture of the past.

Source 1  A woomera (top), a shell used in rainmaking ceremonies, and a killing stick (bottom)

Source 2  A stone spearhead from the Kimberley region of Australia

Source 3  Two Indigenous men using natural resources to start a fire

Analysing primary and secondary sources

Sources of the first Australians reveal a mostly semi-nomadic people. There is evidence they understood the land and seasons and had great skills as trackers and mimickers (of animal noises, for example). They adapted the natural resources they found to:

• build their shelters
• manage their environments
• fashion their weapons, tools and musical instruments
• make carry bags, water containers and cradles
• keep themselves warm, fed, watered and alive.

Study the following sources and use them to develop an understanding of how various Indigenous Australian groups used natural resources to survive in the harsh Australian environment.
Source 4  Hunting techniques among the Iora tribe in the Sydney region

By any standards, the Aborigines were technologically weak but manually adept. They had not invented the bow-and-arrow, but they had exquisite skill as stalkers, trackers and mimics. A competent hunter needs to be able to read every displacement of a leaf or scuffed print in the dust. He must freeze in mid-step and stand unblinking on one leg for half an hour, waiting for a goanna to work up the courage to come all the way out of its log. He must know how to pick up a blacksnake by the tail and crack its head off, as one cracks a whip ... Above all, the hunter needed to know every detail of animal life in his territory – migratory patterns, feeding habits, nesting, shelter, mating. Only thus could a small nomadic group survive.

Source 5  An early 18th-century painting showing Indigenous men hunting birds, entitled *Throwing the spear*, Ballarat Fine Art Gallery

Apply the skill

1  Fill in the table to help develop your understanding of Sources 2, 3 and 5.

<table>
<thead>
<tr>
<th>Source number</th>
<th>What does the source depict or describe?</th>
<th>How did the activity or item depicted or described in the source help that particular Aboriginal group to survive?</th>
<th>What can you tell about the ancient people’s relationship with the land from the source?</th>
</tr>
</thead>
<tbody>
<tr>

2  Write a 100-word paragraph to explain how Indigenous Australians used the land. Make sure you refer to at least two sources provided here.

3  How could you find out more information about any of these sources?

4  How could you determine the age of the artefacts in Sources 1 and 2?

Extend your understanding

Historical sources are often more useful to a historian when he or she can access additional sources of information about a particular source. Look at the Aboriginal rock art in Source 6.

1  What can you tell about the people who painted this, just from looking at it?

2  Do some research on the Internet to find out more about the people who lived at Injalak Hill. What more can you tell about the source using the additional information you have found?

3  What techniques could you use to determine how old this rock art is?

Source 6  Aboriginal rock art at Injalak Hill, Arnhem Land
7.5 Conserving and protecting sources

Historical sources can be very fragile. Once exposed to the open air, weather, pollution and humidity, many items will quickly deteriorate. In addition, sources may be stolen or broken by careless handling. If a source is important, it needs to be conserved to secure its value for future generations.

Tourist numbers are growing rapidly in places such as Pompeii and the Indigenous art caves in the Kimberley. Too much trekking over the same ground, too much touching and too much breathing in a confined space can damage sources, especially if they are very old and fragile. In addition, such actions may sometimes cause offence to others, or show disrespect to others’ beliefs.

Conservators are now taking a range of measures to protect certain objects and places from overexposure. For example, Indigenous cave art is often fenced off. Such an action respects the spirituality of Indigenous people but also protects this ancient art from damage. Another example is the inclusion of certain old buildings in Australia and around the world on heritage lists, which ensures their protection and conservation.

Many sources are stored in libraries, archives, art galleries and public museums where they can be cared for and preserved. Valuable, fragile or very important sources can usually be viewed but not borrowed, touched or removed. Some examples include:

- the Mitchell Library in the State Library of New South Wales, which houses a huge collection of historical sources on Australiana
- the Bunjilaka Aboriginal Cultural Centre at the Melbourne Museum, which aims to ‘keep alive’ the oral stories and history of Victoria’s Koorie people. In this case, conservation is about making sure stories are not forgotten.

Venues such as museums and galleries provide security and proper storage facilities. Their design also sets the right environmental conditions. Some items, for example, must have muted light or low humidity. Think how your clothes fade when you wear them outside in the sun a lot. It is important to protect historical sources from such damage. In addition, these institutions have staff who know how to restore and repair damaged items. They also know which artefacts are the most important to conserve, because conservation can be expensive.

Historical sources are part of our heritage. They are a reminder of the glories and terrors of past times, and the mistakes and great advances made. They remind us where we have come from and what shaped our societies and cultures. They give us a sense of who we are as a people. Conserving these remnants of the past ensures that future generations will be able to appreciate a shared heritage.
7D Why is conservation important?

Source 2 The Gallery of First Australians in the National Museum of Australia in Canberra includes this display, which provides evidence of the strong connection Torres Strait Islanders had with the sea. The museum conserves these sources in order to maintain this part of Australian history.

Check your learning 7.5

Remember and understand
1. In your own words, describe what conservation is.
2. List the different reasons for conserving historical sources.

Apply and analyse
3. Explain what precautions museums put in place for fragile artefacts and why.
4. Outline the reasons for banning access to popular Indigenous sites.

Evaluate and create
5. Justify whether you think access to significant Indigenous sites (like the one shown in Source 3) should be limited.
6. Create a plan for conservation of an important source of history in your community. Think about why it is important and what factors may cause it to be damaged.

Source 3 The Pintupi Aborigines’ women’s Dreaming site

It is important to conserve not just our recent past but also our ancient past. Some groups want to ban access to significant Indigenous sites in order to aid their conservation. Large numbers of tourists visiting a site can both physically damage it and can be regarded as disrespectful.

Source 3 shows a sacred women’s Dreaming site belonging to the Pintupi Aborigines. Some people think public access to such sites should be limited in order to conserve it.

For more information on the key concept of evidence, refer to page 167 of ‘The history toolkit’.
This rich task looks at two major conservation projects: the Gate of Ishtar in Iraq and the Tomb of Menna in Egypt.

Conserving ancient sites

In order to conserve and restore ancient historical sites, historians need to understand what these sites used to look like, how they were constructed and how they may have been damaged over the years. Conservation projects are expensive and time-consuming, so historians need to do extensive research to understand a site before conservators can accurately restore it.

Identifying and locating relevant sources about ancient sites using ICT

Researching ancient sites to understand why they are significant, what they were like in the ancient past and how they have changed is an important part of the work that archaeologists, historians and conservators do. The first part of this research involves identifying and locating different sources to help them. To begin such research, follow these steps:

**Step 1** Construct a table to organise your thoughts and direct your research. Begin by listing the things you already know about the ancient site (such as where it is, what civilisation it was built by, and anything you know about that civilisation). Then list the things you still need to find out about the ancient site (such as who built it, how it was built, what it looked like when it was built, what it looks like today, what it was used for, how and why it was damaged, and whether or not it is worth conserving).

**Step 2** Use the questions you have listed in your table to create keywords and search terms for an Internet search.

**Step 3** Conduct an Internet search to gather relevant sources and to answer your questions about the ancient site. You may also like to find images of the site and any conservation work that has been done so far.

**Step 4** Remember to assess the reliability of the sources you have collected. Think about who wrote them and why. Also be aware of the types of websites you collected them from. Were they reputable? A set of guidelines to help you identify relevant and reliable sources on the Internet is included in ‘The historian’s toolkit’ in this book.

Source 1 Detail of an ox on the front wall of a reconstruction of the Ishtar Gate

Source 2 An artist’s impression of a procession entering the city of Babylon through the Ishtar Gate
Apply the skill

1. Conduct an Internet search to locate and identify relevant sources related to these ancient sites:
   a. the Ishtar Gate – the main entrance to the ancient walled city of Babylon built around 575 BCE, now part of modern-day Iraq
   b. the Tomb of Menna – the tomb of an Egyptian official in Egypt who died around 3400 years ago, during the rule of pharaoh Amenhotep III.

Follow the steps outlined above to complete the following table in your notebook.

<table>
<thead>
<tr>
<th></th>
<th>Site 1 – Ishtar Gate</th>
<th>Site 2 – Tomb of Menna</th>
</tr>
</thead>
<tbody>
<tr>
<td>What I know already</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Where is it?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>What civilisation built it?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Do I know anything else about it?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>What I still need to find out</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Who built it?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>How was it built?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>What did it look like when it was built?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>What does it look like now?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>What was it used for?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>How and why was it damaged?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Should it be conserved?</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

2. Make a list of all of the websites you visited and the sources you gathered.
   a. Which of these sources do you think are the most reliable and relevant? How can you tell?
   b. Which of these sources do you think are not reliable or relevant? How can you tell?

3. Now imagine that the governments of Iraq and Egypt are deciding whether to fund the conservation of these two ancient sites. Make a recommendation about why and how each site should be conserved (if you believe it should).

Extend your understanding

1. Conduct some further research to find out which organisations are currently responsible for conserving the Ishtar Gate and the Tomb of Menna.

2. Conservation projects are expensive, so determine who is funding these organisations to work on the sites.

3. What reasons do the organisations give for conserving the Ishtar Gate and the Tomb of Menna?

4. Do you think that there are any other reasons to fund the sites’ conservation?

5. Imagine you are a historian working for one of these organisations. Write a ‘funding proposal’ paragraph that justifies why your organisation requires funding to continue its conservation work of the site.
