CHAPTER 1
SCIENCE TOOLKIT.... 1

1.1 There are many types of scientific investigations..... 2
1.2 Scientists communicate using scientific language 4
1.3 Experiments must be controlled..... 6
1.4 Data can be analysed 8
1.5 Clinical testing uses the scientific method 12
1.6 Scientific investigations must be ethical 14
Chapter 1 Review..... 16

CHAPTER 2
GENETICS..... 19

2.1 Scientists review the research of other scientists..... 20
2.2 DNA consists of sugar-phosphate backbone and complementary nitrogen bases 22
2.3 Chromosomes carry genetic information in the form of genes 24
2.4 DNA holds the code for building proteins..... 26
2.5 Mitosis forms new somatic cells 28
2.6 Meiosis forms gamete cells 30
2.7 Alleles can produce dominant or recessive traits 32
2.8 Alleles for blog group traits co-dominate..... 36
2.9 Alleles on the sex chromosomes produce sex-linked traits 38
2.10 Inheritance of traits can be shown on pedigrees 42
2.11 Mutations are changes in the DNA sequence..... 44
2.12 Genes can be tested..... 48
2.13 Genes can be manipulated 50
2.14 Genetic engineering is used in medicine..... 52
Chapter 2 Review..... 54

CHAPTER 3
EVOLUTION 57

3.1 Darwin and Wallace were co-conspirators..... 58
3.2 Natural selection is the mechanism of evolution..... 62
3.3 Different selection pressures cause divergence. Similar selection pressures cause convergence..... 64
3.4 Fossils provide evidence of evolution..... 66
3.5 Multiple forms of evidence support evolution..... 70
3.6 DNA and proteins provide chemical evidence for evolution..... 72
3.7 Humans artificially select traits 74
3.8 Natural selection affects the frequency of alleles..... 76
Chapter 3 Review..... 78

CHAPTER 4
THE PERIODIC TABLE..... 81

4.1 Scientists refine theories and models over time..... 82
4.2 The structure of an atom determines its properties..... 86
4.3 Groups in the periodic table have properties in common 90
4.4 Non-metals have properties in common 92
4.5 Metal cations and non-metal anions combine to form ionic compounds..... 94
4.6 Non-metals combine to form covalent compounds 98
4.7 Metals form unique bonds... 100
4.8 Nanotechnology involves the specific arrangement of atoms..... 102
Chapter 4 Review..... 104

CHAPTER 5
CHEMICAL REACTIONS 107

5.1 Mass is conserved in a chemical reaction..... 108
5.2 Balanced chemical equations show the rearrangement of atoms..... 110
5.3 Synthesis and decomposition reactions can be represented by equations..... 112
5.4 Acid reactions depend on strength and concentration..... 114
5.5 The solubility rules predict the formation of precipitates..... 116
5.6 Combustion reactions produce heat and light energy..... 118
5.7 Polymers are long chains of monomers..... 120
5.8 Temperature, concentration, surface area and affect reaction rate 122
5.9 Catalysts increase the rate of a reaction 126
5.10 Green chemistry reduces the impact of chemicals on the environment..... 128
Chapter 5 Review..... 130

CHAPTER 6
GLOBAL SYSTEMS..... 133

6.1 The Earth's sphere's are balanced..... 134
6.2 The water cycle is a global cycle..... 138
6.3 Matter cycles through the Earth's spheres 140
6.4 Human activity affects the carbon cycle..... 144
6.5 Evidence supports enhanced climate change 146
6.6 Climate change has widespread effects..... 150
6.7 Humans can impact climate change..... 152
Chapter 6 Review..... 154

CHAPTER 7
THE UNIVERSE.... 157

7.1 The universe was studied by early Australians 158
7.2 The Earth is in the Milky Way 160
7.3 Stars have a life cycle 164
7.4 The galaxies are moving apart 166
7.5 Evidence supports the Big Bang theory..... 168
7.6 Technology aids cosmological research 170
Chapter 7 Review..... 172

CHAPTER 8
MOTION 175

8.1 Displacement is change in position with direction..... 176
8.2 Velocity is speed with direction 178
8.3 Acceleration is change in velocity over time..... 180
8.4 An object in motion remains in motion until a net unbalanced force acts on it 182
8.5 Force equals mass × acceleration 184
8.6 Each action has an equal and opposite reaction..... 186
8.7 Momentum is conserved in a collision 188
Chapter 8 Review..... 190

CHAPTER 9
ENERGY 193

9.1 Work occurs when an object is moved or rearranged. Energy can be calculated..... 194
9.2 Energy is always conserved..... 196
9.3 Thermodynamic systems that are connected reach thermal equilibrium 198
9.4 Conduction transfers kinetic energy between particles. Convection causes the particles to move..... 200
9.5 Thermodynamics can be described by laws..... 202
Chapter 9 Review..... 204

CHAPTER 10
LEARNING AND MEMORY 207

10.1 The brain is responsible for learning and memory 208
10.2 Animals learn in many different ways 210
10.3 Animals can learn behaviour from their environment 212
10.4 There are three different memory stores 214
10.5 Memory and learning can be improved 216
10.6 Neuroimaging makes memory and learning visible 218
Chapter 10 Review 220

CHAPTER 11
EXPERIMENTS 223

2.1 Experiment Extracting DNA 224
2.2 Challenge Modelling the structure of DNA 225
2.4 Skills lab Making protein 226
2.5 Skills lab Cell division in action 227
2.6 Skills lab Modelling meiosis 227
2.7 Experiment Zazzle genetics 228
2.8 Experiment Blood typing experiment 229
2.9 Experiment Colour-blindness inheritance 230
2.11 Skills lab Identifying mutations 231
2.14 Challenge Edible genetic engineering 232
3.2 Experiment What if the habitat of bean prey was changed? 233
3.3 Experiment Divergent and convergent evolution of big beaks and small beaks 234
3.4 Experiment Popcorn dating 235
3.6 Experiment Who is my cousin? 236
3.7 Challenge Selective breeding of dogs 237
3.8 Experiment Selecting for sickle cell anaemia 238
4.3 Experiment Reactivity of metals 239
4.4 Challenge Identifying patterns in the periodic table 240
4.5A Experiment Conductivity of ionic compounds 241
4.5B Skills lab Ionic compounds 242
4.6 Challenge Modelling covalent molecules 243
4.7 Challenge Modelling alloys 244
5.1 Experiment Comparing mass before and after a chemical reaction 245
5.2 Experiment Modelling chemical equations 246
5.3A Experiment Direct synthesis with a 'pop' 247
5.3B Experiment Decomposing a carbonate 248
5.3C Experiment Electrolysis 249
5.4 Experiment Acid titrations 250
5.5 Experiment Precipitation reactions 251
5.6 Experiment Combustion of wire wool 252
5.7 Experiment Polymerisation of casein 253
5.8 Experiment Factors affecting reaction rate 254
5.9 Experiment Using a catalyst 255
6.1 Challenge Using computer simulations 256
6.2A Experiment Testing phosphorus 257
6.2B Experiment Make your own clouds 258
6.3 Challenge Making a simple barometer 259
6.4 Challenge Modelling a carbon sink 260
6.5A Experiment What factors affect a greenhouse? 261
6.5B Experiment Melting ice and its effect on sea levels 262
6.6 Challenge Salt water density 262
7.1 Skills lab Using a star chart 263
7.1 Challenge Modern-day Australian astronomers 264
7.2 Challenge Understanding parallax 264
7.2 Experiment Calculating the distance to the Sun 265
7.4 Challenge Exploring the Doppler effect 266
7.4 Experiment Investigating emission spectra 266
7.5 Challenge The expanding universe 267
8.1 Challenge Bringing graphs to life 267
8.2A Experiment The ticker timer 268
8.2B Experiment Using a motion sensor 269
8.3 Challenge Measuring acceleration by timing or using a motion sensor 269
8.4A Challenge Make an accelerometer 270
8.4B Challenge How do you like your eggs? 270
8.5A Experiment Resultant forces 271
8.5B Experiment Accelerating masses 272
8.6 Experiment What if forces were changed on Newton's rocket? 273
8.7 Experiment Colliding trolleys 274
9.1 Experiment What if an elastic band was stretched further? 275
9.2 Challenge Conservation in action 276
9.3 Experiment Thermal energy versus temperature 277
9.4 Experiment Investigating heating by convection 278
10.1A Challenge Neuroscientist interview 279
10.1B Challenge Modelling neural pathways 280
10.1 Skills lab Modelling brain structure and function 281
10.5 Experiment Improving memory recall 282
